California's Medicaid Management Information System is a 30-year-old legacy system comprising more than 90 applications, written in seven computer languages, managed through five different versions of software management tools, five data management systems, and are hosted across three major hardware architecture that includes major computer servers, UNIX and Windows. The California Department of Healthcare Services (DHCS) is recruiting some sharp IT professionals who, judging by job descriptions, are not afraid of the challenges. By looking out of the box, and finding the right approach to its environment, one state agency can improve its security posture and meet expanded cyber threats. When schools across the country turned to online learning in March 2020, they had to quickly address two challenges. Why taking advantage of managed services can be the best option to ensure network stability and actively identify and defend against threats while accommodating public sector budget constraints.
